

TATTOO AFTERCARE

Leave the bandage on overnight

In the morning wash the tattoo lightly with unfragranced, mild handsoap. Be sure to remove all ointment, blood and any other residue.

In 3-5 days your tattoo will develop a thin hard layer that will begin to peel, this is normal. Do not pick or scratch your tattoo.

When the tattoo is dry apply a thin, light layer of unscented hand lotion. More lotion is not better.

Always make sure that you hands are freshly washed before touching your tattoo to prevent infection.

Showers only. Avoid baths, swimming pools and hot tubs until the tattoo has finished healing.

Avoid the sun, tight clothing and keep workouts light.
